SKIMMING DEVICES – HOW THEY LOOK

SKIMMING DEVICE

This is actual skimming device removed from the ATM card reader and this is how the skimming device looks when it is actually attached to the ATM. Notice that the ATM reader looks normal on visual inspection.

Without a physical inspection, it is difficult to see any problem with the card reader.

SKIMMING DEVICE

This skimming device removed from the ATM card reader looks identical when compared with the actual reader.

REAL

FAKE

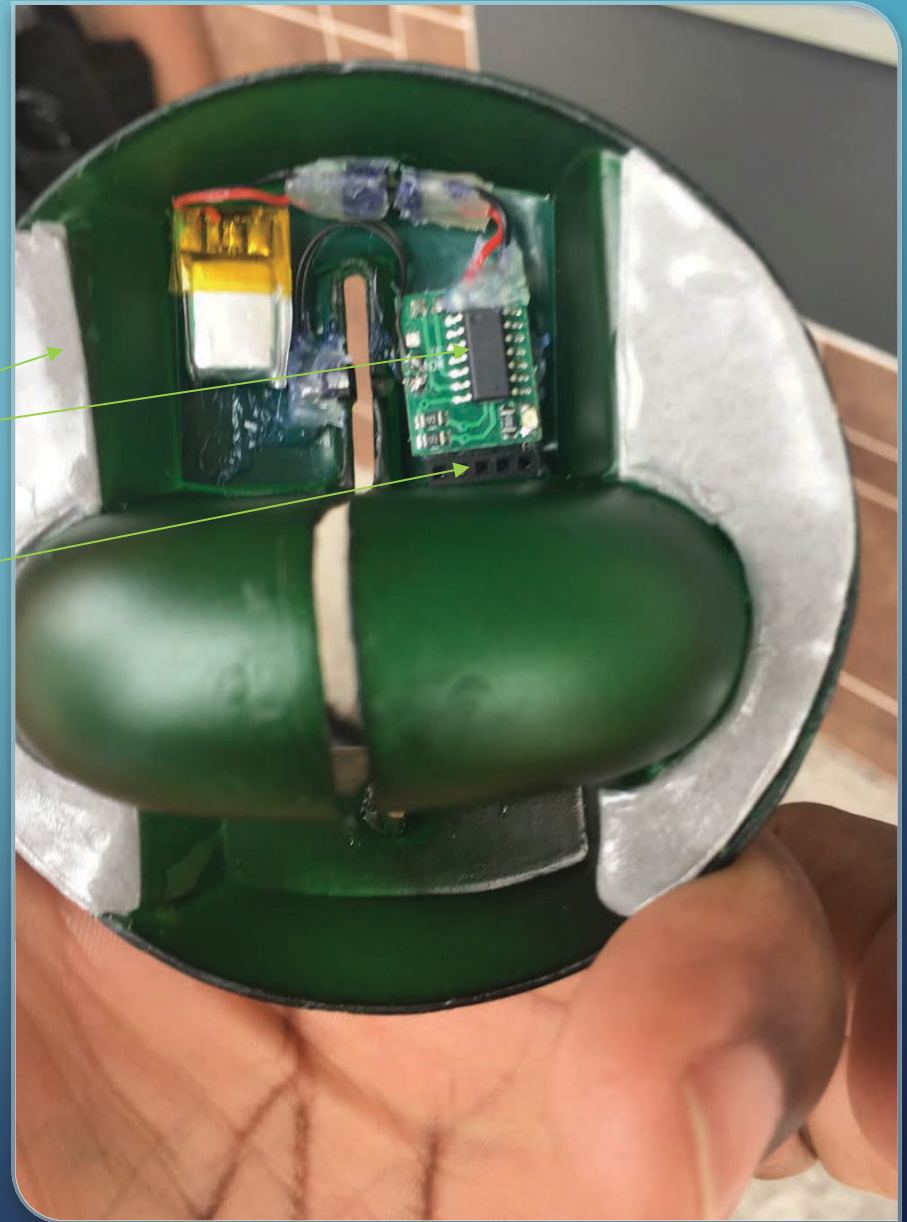

SKIMMING DEVICE

This is an actual skimming device removed from the ATM card reader that was placed on a financial institution's ATM. Except that it's detached, the reader looks fairly normal...

SKIMMING DEVICE

This is the same skimming device removed from the ATM card reader. But when you remove the skimming device and flip it over, you can see the white adhesive tape and the skimming hardware used to capture information from the magnetic strip. This particular device has a female connector for transferring card information and onto another device which can be used to create new cards.

SKIMMING DEVICE

This skimming device removed from the ATM had two components. The second component of the skimming device was a camera used to capture members' PINs. The camera was hidden in the frame around the cash dispenser. Always tug on this frame to see if it comes loose.

SKIMMING DEVICE

This is the backside of the skimming device removed from the ATM. The frame is attached with adhesive and is placed directly over the ATM cash dispenser frame.

The camera components are attached to the inside of the frame along with a chip to store information.

SKIMMING DEVICE

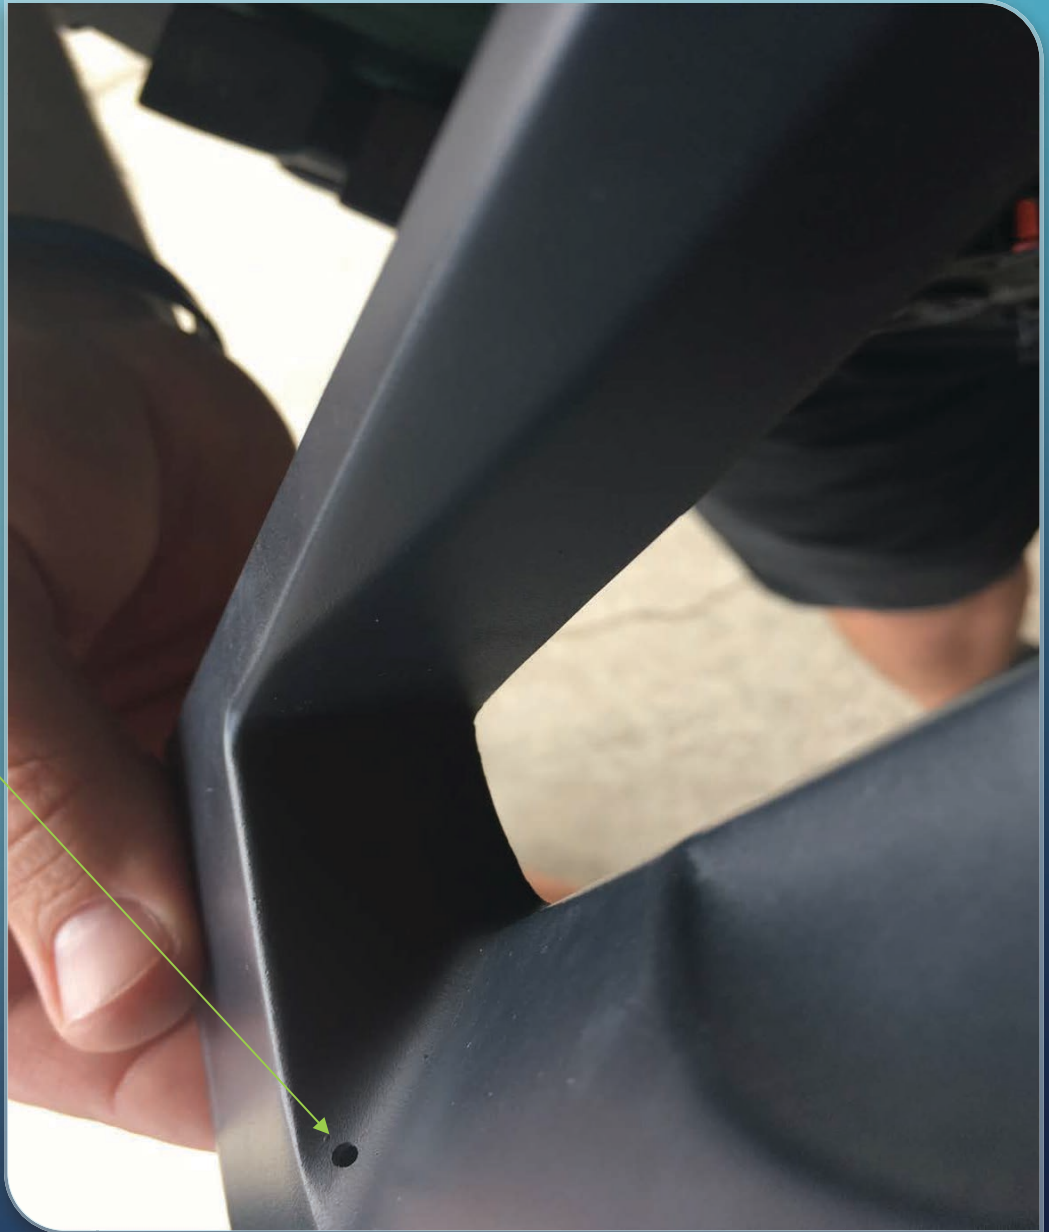

This is the skimming device removed from the ATM cash dispenser. The frame is attached with adhesive and is placed directly over the existing ATM cash dispenser frame.

The adhesive tape is also green.

SKIMMING DEVICE

This is the skimming device removed from the ATM cash dispenser frame. Notice the small hole in the corner of the frame. This is unusual. The small hole provides a view for the camera lens.

SKIMMING DEVICE

Remember: Just because it looks normal doesn't mean it is normal.

Always conduct a physical inspection by pulling or tugging on the card reader, the cash dispenser frame and the key pad.

Look for anything unusual such as holes, tape or wires.

Be Aware and Be Safe!
